

Easy to Use PC Backup Software - Time Machine for Windows

"a delightfully easy way to back up data"

Backup for Windows 8, 7, Vista & XP

Backup & automatic versioning of docs, images and other files, allows you to preview & restore versions of your files from different points in time. Mistakes such as saving over another file, deleting a complete document etc. are now a thing of the past.

Very Fast Backup & Restore

Your data is protected every time you make a change – without slowing down your PC.

- **Save Space - Only back up sections of files that changed using ReverseDelta™ Technology**

Using its ReverseDelta™ incremental technology, Oops!Backup will only back up the actual changes you make to a file – without needing to back up the whole file again every time you make a change.

- **Continuous Data Protection (CDP) for Best Protection**

Highly tuned file-change-detection technology ensures that you are protected at all times.

- **Double-Protection with Backup Drive Redundancy**

Automatically keep a double-backup to protect against theft, fire or loss of your backup drive.

- **Back up to NAS, Network Drive & USB**

Choose the locations where you want to back up to; offices can choose to back-up to their server or NAS drive.

- **Automatic Backup on Connect with Plug & Protect™ - for Laptop Users**

Automatically initiates a backup once the backup drive is connected to the computer.

- **Restore different versions of your files with inbuilt BackInTime Technology**

Restore from multiple points in time rather than 'the most recent backup'

Pricing starts from \$39 for one PC

Price include free upgrades for the 1st year of your purchase.
